How to publish on the International Conference on Family Planning Gateway (ICFP) on Gates Open Research

1. Check your eligibility to publish
   - Make sure that:
     - At least one of the main authors is a qualified researcher.
     - The work is original research.
     - The paper you are submitting to the ICFP Gateway is in follow-up to work presented at the conference.

2. Prepare your research for submission
   - Follow the article guidelines for your specific article type.
   - Adhere to the appropriate reporting guidelines for your study.
   - Ensure you have obtained the appropriate ethical approval and consent for your research and include a statement about this in the article.

3. Deposit your data
   - Make sure you correctly format, de-identify, and deposit your data, as per Gates Open Research's Open Data policy.

4. Submit your research at https://gatesopenresearch.org/gateways/icfp/for-authors/publish-your-research

5. Suggest reviewers
   - You will have to suggest five suitable peer reviewers. There is a peer review finding algorithm to help with this, and the Gates Open Research editorial team will provide support if you need it.

6. Pre-publication checks
   - Articles undergo pre-publication checks including:
     - Data availability
     - Quality of English language
     - Plagiarism
     - Author criteria
     - Adherence to reporting guidelines
     - Adherence to ethical standards

7. Publication
   - As soon as an article passes pre-publication checks it is published with a DOI and visible on Gates Open Research.

8. Peer review process
   - Following this process will give you the best chance of being published successfully and rapidly. If you have any questions after reading the useful guides and suggestions listed above please contact our editorial team at editorial@gatesopenresearch.org. They would be delighted to help.

9. Indexing
   - Following the peer review process, the article will be assigned to one of six Subject Categories, at the request of the editor-in-chief and two approved with reviewers. It then officially appears peer-reviewed and is referred to in SCOPUS, PubMed, and other reputable bibliographic indexes.
